/ 05

PDF GUIDE · RACE DAY + CHECKLISTS

RACE DAY. NO SURPRISES.

You've put in eleven weeks. This guide makes sure the only decision you have to make on race day is your pace.

CONTENTS

01	Know the rules. Keep your minutes.
02	The race is won on the runs.
03	The fitness is built. Don't lose it now.
04	Prep the night before. Just execute.
05	The race is won in your head.
06	Done. Now learn from it.
07	Forget nothing. Tick it off.
08	Your plan. On paper.

01 · HOW HYROX WORKS

KNOW THE RULES. KEEP YOUR MINUTES.

The cheapest seconds in a race are the ones you don't hand back through penalties or confusion. This chapter covers what happens on the floor, how your time is taken, and where people give away time for nothing.

HYROX is the same race everywhere. Berlin, Vienna or London, you get eight kilometres of running and eight stations in the same order. One kilometre, one station, repeat, and after the last station you finish. That consistency is your advantage: everything can be trained, planned and rehearsed in advance.

8 × 1 km	8	1
RUNNING	STATIONS	CHIP ON YOUR ANKLE

FORMAT AND THE ROXZONE

You run a loop that takes one to five laps per kilometre, depending on the venue. After every kilometre you enter the **Roxzone**, the transition area that takes you to the station and back onto the course. The Roxzone has IN and OUT arches. Use the wrong one and the rulebook gives you 2 minutes per infringement. Sounds silly. In a packed hall with your heart rate at the ceiling, it happens more than you'd think.

There's water in the Roxzone at least once per pass, sometimes a sports drink too. The water is for drinking. Pouring it over your head counts as rapid cooling and costs 2 minutes. Cups and gel wrappers go in the bin, not on the floor: another 2 minutes.

One lap can be shorter because of where the start tunnel sits; the missing metres are made up on the last lap. Count your own laps. A missed lap is one of the most expensive mistakes you can make, anywhere from 3 minutes to a DQ depending on the course layout.

DIVISIONS

OPEN VS. PRO

Open is the main division. Pro goes heavier on the sleds, farmers carry, lunges and wall balls. Running, SkiErg, row and burpee broad jumps are the same for everyone. First race? Go Open. Pro makes sense once you're handling the Open stations with room to spare.

SINGLES, DOUBLES, RELAY

- **Singles:** all of it, on your own.
- **Doubles:** two of you, running all 8 km together and splitting the station work however you like. Don't drop your partner on the run, separation gets penalised.
- **Relay:** team of four, each runs 2 × 1 km and takes 2 stations.

Your age group is based on your age on race day. Minimum age is 16.

STATIONS AND WEIGHTS (SINGLES)

Sled weights are totals, sled included. Checked against the official 2025/26 Singles rulebook; the 26/27 rulebook lists the same numbers.

#	STATION	WORK	WOMEN OPEN	WOMEN PRO	MEN OPEN	MEN PRO
01	SkiErg	1,000 m	–	–	–	–
02	Sled Push	50 m (4 × 12.5)	102 kg	152 kg	152 kg	202 kg
03	Sled Pull	50 m (4 × 12.5)	78 kg	103 kg	103 kg	153 kg
04	Burpee Broad Jumps	80 m	–	–	–	–
05	Rowing	1,000 m	–	–	–	–
06	Farmers Carry	200 m	2 × 16 kg	2 × 24 kg	2 × 24 kg	2 × 32 kg
07	Sandbag Lunges	100 m	10 kg	20 kg	20 kg	30 kg
08	Wall Balls	100 reps	4 kg / 2.70 m	6 kg / 2.70 m	6 kg / 3.00 m	9 kg / 3.00 m

The SkiErg and rower dampers are preset to 6 and you're allowed to change them. Rower footplates are preset to position 4. Doubles use the same weights by division, and mixed pairs use Men Open weights per the rulebook. Relay has its own rulebook.

COMMON NO-REPS AND PENALTIES

On stations 1–7 you get one warning per station for movement standards. The second infringement means an invalid rep plus a time penalty. Wall balls get no warnings: rep or no-rep.

WHERE	WHAT THE JUDGE WATCHES	COST
SkiErg / Rowing	Feet on the platform (ski) or footplates (row) before you touch the handle. When you're done, stay put, raise an arm and wait for the judge to confirm.	15 s per infringement; leaving short can mean a penalty up to DQ
Sled Push / Pull	Sled fully behind the line at the start, stay in your lane, sled fully past the 12.5 m mark. On the pull: stay standing (no kneeling or sitting) and don't step on the solid box lines.	Missed lane 3 min
Burpee Broad Jumps	Chest on the floor, hands max 30 cm in front of your toes, hands don't creep forward once placed, feet don't pass your hands, two-footed take-off and landing.	15 s per infringement
Farmers Carry	Both kettlebells, arms extended. You can put them down, you can't move them forward. Back in the box at the end, handles up.	Missed lap 3 min, incorrect return 30 s
Sandbag Lunges	Trailing knee clearly touches the floor, full stand at the top, alternating legs with no shuffle steps, bag on your shoulders the whole time.	15 s per infringement; bag off shoulders 15 s, second time DQ
Wall Balls	Start standing with the ball in your hands, squat below parallel, hit the target zone. After a bounce on the floor, reset from standing.	15 s per missing rep
Anywhere	Wrong arch, chalk outside the sled pull and farmers carry, outside assistance (drinks or food from anyone but the aid station), spitting, littering, pouring water over yourself.	2 min per infringement
Start	Starting in a different wave without permission. Racing without the chip on your ankle.	DQ / DNS

Penalties shift a little from season to season. Before your race, read the rulebook for the season you're racing in at hyrox.com/rulebook.

HOW YOUR TIME IS TAKEN

The chip goes on your ankle and nowhere else, and no chip means DNS. The clock runs from start to finish and the Roxzone is part of it. In the results you'll see every run, every station and your Roxzone time split out. Results go up on results.hyrox.com right after the event, and penalties can still be added for up to 48 hours.

GOLDEN RULE

The judge is always right. Hear "no-rep", don't argue, make the next rep clean. An argument costs more time than one extra rep.

02 · STRATEGY AND PACING

THE RACE IS WON ON THE RUNS.

Eight kilometres of running make up roughly half your time. If you can run evenly under fatigue, you'll pass people who are stronger than you on the stations.

I see the same pattern in results all the time. First kilometre 20–30 seconds faster than it should be. Second one still fine. After the sled pull the pace breaks, and from km 5 every run is a minute slower than the first. Those athletes lose more on the runs than they could ever win back with station technique.

> You don't judge a good race by the first kilometre. You judge it by how close your last two runs are to your first two.

HOW TO PACE IT

01 **Don't go out hot.** Adrenaline, music, people everywhere. Everything pushes you faster. Run your planned race pace, even 5 seconds slower. A fast start buys you nothing except burning through your carbs early.

02 **Hold runs 2–6 in your target range.** You've got individual pace zones from your entry test. Race pace is your anchor. The first kilometre after the sleds will feel like running in concrete. Expect it, and don't chase the pace the moment you leave the Roxzone.

03 **Runs 7 and 8 are mental.** A run after the farmers carry, then the last one after lunges. This is where you find out who started sensibly. If you've got something left, let it go here.

04 **The first 200 m after a station is a reset.** Shorter stride, higher cadence, get your breathing under control. Then settle into pace.

TARGET SPLITS

Two examples of how a race can break down. They're not standards, they're a template for building your own plan. You'll fill in your numbers on the pacing card in chapter 08, based on your tests and simulations from the program.

SEGMENT	TARGET ~1:30	TARGET ~1:15	NOTE
Runs (8 × 1 km)	8 × 5:30 = 44:00	8 × 4:55 = 39:20	Average, not every km the same
SkiErg	4:45	4:10	Don't blow up, it's only the start

SEGMENT	TARGET ~1:30	TARGET ~1:15	NOTE
Sled Push	3:30	2:50	Varies a lot with the floor
Sled Pull	5:00	3:50	Often the biggest loss in Open
Burpee Broad Jumps	5:30	3:50	Rhythm, not a sprint
Rowing	4:50	4:15	Time to breathe and reset
Farmers Carry	2:00	1:30	No putting them down
Sandbag Lunges	5:15	3:50	Save legs for the last run
Wall Balls	7:00	4:50	Sets planned in advance
Roxzone total	8:00	6:00	16 passes, the silent time leak
Total	1:29:50	1:14:25	

STATION BY STATION

SKIERG
1,000 M

Pull from your hips and trunk, arms just finish the stroke. Pace slightly off your best 1,000 m, steady rhythm, breathe in at the top, out on the pull. **Where people lose time:** sprinting the first 500 m and taking cooked arms into the sled push.

SLED PUSH
50 M · 4 LANES

Low position, hands on the poles, short quick steps through the whole foot. Finish each lane in one go: stopping and restarting the sled costs more than slowing down. Turn fast at the end and drive straight away. **Where people lose time:** stopping mid-lane. If you have to stop, do it at the end, not halfway.

SLED PULL
50 M · 4 LANES

Stand in the box, weight in your heels, pull with your legs and trunk, arms doing short hand-over-hand pulls. Pile the rope beside you so you don't trip on it. Breathe with the pulls. **Where people lose time:** arms-only pulling, folding forward, drifting out of the box. Watch the solid lines, you can't step on them with the rope in your hands.

BURPEE BROAD JUMPS
80 M

Same rhythm from the first rep to the last. Down to the floor (a knee down on the way up is fine), feet under you, two-footed jump, short landing, straight back down. Breathe out on the jump. Keep your hands close to your toes, 30 cm max. **Where people lose time:** fast start, then standing on their hands. 80 m unbroken at a slow pace beats sprinting and resting.

ROWING 1,000 M	After the burpees this feels like a gift. Legs, body, arms. Long drive, calm recovery. Use the first 100 m to settle your breathing, then row your pace. Perfect spot to check in with yourself and set up the second half of the race. **Where people lose time:** high stroke rate with a weak drive.
FARMERS CARRY 200 M	Shoulders down, shoulder blades set, short fast steps, almost a jog. Firm grip, not a death grip. Chalk is allowed here, but only the event's chalk. **Where people lose time:** putting the bells down. Every set-down and pick-up costs more than you'd think. If you must, put them down, but don't move them forward.
SANDBAG LUNGES 100 M	Bag high on your shoulders, torso upright, back knee kisses the floor, full stand at the top. Step rhythm like a metronome. Rest standing with your feet together, not half-squatting. **Where people lose time:** knee not touching and not standing tall. Two warnings, then 15 seconds each.
WALL BALLS 100 REPS	Decide your sets in advance, e.g. 25-25-20-15-15 or 10 × 10. Rest standing with the ball in your hands, not on the floor. Squat below parallel, drive from the hips, arms just guide it. Breathe out on the throw. **Where people lose time:** fatigue no-reps (shallow squat, ball below the line) and long breaks. Short rests, more often.

ROXZONE AND TRANSITIONS

The Roxzone is sixteen passes. Lose 15 seconds on each and that's four minutes gone, and nothing in your results will explain it, because it doesn't hurt. The rules are simple:

- The Roxzone isn't a rest stop. Walk briskly or jog.
- Drink on the move. Don't grab a cup as an excuse to stand.
- Know in advance where your station is. Walk the IN → station → OUT route when you check out the venue.
- Set up gloves, chalk and belt so they don't cost time. What you don't take off, you don't have to put back on.

03 · RACE WEEK · WEEK 11

THE FITNESS IS BUILT. DON'T LOSE IT NOW.

You won't gain any fitness in week 11. You can only lose it. The goal is to show up on the start line rested, sharp, and with zero question marks in your head.

The taper in week 10 brought the volume down. Race week carries on: short sessions with a few efforts at race pace so your body remembers what race pace feels like. Your programming lands in the training app on Monday as usual. Stick to it. Below is the logic behind race week and what goes with it outside training.

> The most common race-week mistake? Someone feels great and on Wednesday "just tests" wall balls and the sled. On Saturday they're running on heavy legs.

DAY BY DAY

Day 0 = race day. If you race on a Saturday, day −6 is Sunday.

DAY	TRAINING	SLEEP AND RECOVERY	FOOD AND LOGISTICS
−6	Rest or an easy jog, mobility	Start going to bed earlier, aim for 8 h+	Check registration, division, wave
−5	Short run with a few race-pace efforts	15 min mobility in the evening	Normal eating, plenty of water
−4	Short hybrid: light touch on the stations, nothing to fatigue	No new massages or deep tissue work	Book travel, accommodation, parking
−3	Rest or a walk, mobility	Sleep is your best training now	Shop for the last two days and race morning
−2	Short activation: easy jog + strides	Light release work, foam roller	More carbs, less fibre and fat
−1	15–20 min shakeout + 4–6 strides	Evening routine, phone away	Check-in (if it's the day before), bag packed
0	Warm-up and race	Walk it off afterwards, warm clothes	Breakfast 3–4 h before your start

TRAINING

Intensity stays, volume drops. A few race-pace efforts keep your nervous system switched on. What not to do in race week:

- No new exercises, new shoes or new warm-up.
- No all-out "fitness check". You know what you can do, you've got it from your tests and simulations.
- No heavy sleds or wall balls to fatigue. Eccentric work (lunges, sleds) sits in your legs for up to three days.
- No catching up on sessions you skipped in previous weeks.

SLEEP

Most people sleep worse the night before a race. Nerves, travel, hotel. That's fine as long as you slept well all week. That's why night –2 and every night before it matter. Go to bed earlier, and get up around the time you'll get up on race day so your body adjusts.

FOOD

Race week is neither a diet nor a feast. Eat normally, add carbs in the last two days (rice, potatoes, bread, pasta, fruit) and cut back on fibre and fatty food so your gut stays calm. Nothing new. Details and amounts are in the Complete Nutrition Guide.

- Drink steadily, aim for pale yellow urine. Don't chug litres of water the day before.
- Skip alcohol all week, especially the last three days.
- If you're travelling, bring your own food for the trip and a breakfast you know.

LOGISTICS

Anything you can sort out in advance, sort out by Wednesday. You don't want to be hunting for parking, your ID or somewhere to buy bananas on Friday.

- [ ] Registration, division and wave time confirmed (email or your event account)
- [ ] When and where check-in is (day before or race day, depending on the organiser)
- [ ] Travel and journey time, parking, buffer for traffic
- [ ] Accommodation near the venue if you're coming from far away
- [ ] Current season's rulebook read, especially penalties and permitted gear

GOLDEN RULE

Nothing new in race week. Shoes, food, gels, warm-up, gloves. Everything you use on Saturday, you've already tested in training.

04 · DAY BEFORE AND RACE MORNING

PREP THE NIGHT BEFORE. JUST EXECUTE.

Day –1 has one job: get everything ready so there's nothing left to think about in the morning. Then the morning is just following the timeline.

CHECK-IN AND BRIEFING

How check-in works depends on the organiser. Sometimes it's the day before, sometimes on race day, often both. You'll find the details in the organiser's email and on the event page. The rulebook tells you what to bring: **photo ID and your registration confirmation**. At check-in you get your chip with an ankle strap, your race number, and a wristband whose colour marks your division and wave. The wristband has to be visible on your wrist, and your start time goes on your arm.

If check-in is the day before, use it:

- Walk the venue if you can. Where's the start, the Roxzone, the IN and OUT arches, how long is a lap.
- Work out how many laps make one kilometre. That's something you want in your head, not something you figure out mid-race.
- Find the warm-up area, changing rooms, bag drop and toilets.
- Check when you need to be in the start tunnel. Per the rulebook, 10 minutes before your start time.

FOOD

Day –1 is about carbs and an easy gut. Normal portions, just with more carbs. Have dinner on the earlier side so it's digested by bedtime. No new restaurant, nothing spicy, nothing you're trying for the first time. **Example day:** oats with banana and honey for breakfast, rice with chicken and cooked veg for lunch, bread with jam and fruit in the afternoon, pasta with a simple sauce early in the evening.

PACKING

Pack your bag the night before, using the checklist in chapter 07. Not in the morning. Lay your race kit out on the floor, shoes to headband, and check it's exactly what you trained in. Then into the bag.

- Gloves yes, but only if you train in them. The rulebook allows gloves, not grips.
- No headphones or phone during the race. Leave them in your bag.
- Leave your own chalk at home. Only the event's chalk is allowed, and only on the sled pull and farmers carry.

- Any gel or food for the race has to be on you from the start. You can't take anything from anyone during the race.
- Whatever you start with, you carry to the finish. No handing things off.

EVENING ROUTINE

01 Dinner at least 3 hours before bed.

02 Bag packed, kit laid out, two alarms set.

03 Go through your pacing card. Target splits, wall ball sets, where you drink, when you take your gel.

04 Short visualisation: the start, a calm first kilometre, each station, the last run, the finish. Five minutes is enough.

05 Phone away, lights down, sleep.

Can't sleep? Doesn't matter. Lie there, rest, breathe slowly. One bad night won't wreck your race. Stressing about not sleeping might.

RACE MORNING: COUNT BACK FROM YOUR START

Doesn't matter whether you start at 8 a.m. or 4 p.m. The timeline always works back from your wave. Waves go off at regular intervals and each division starts separately. Starting in a different wave without permission is a DQ. Find out your start time and treat it as the fixed point everything else is calculated from.

TIME	WHAT	NOTE
–4:00	Wake up	Glass of water, toilet, quick stretch
–3:30	Breakfast	Familiar, carb-based, low fat and fibre
–2:30	Leave	With a buffer for travel and parking
–2:00	Arrive at the venue	Check-in (if not done the day before), chip on, bag drop
–1:30	Small snack	Banana, roll, bar, small sips of water
–1:00	Change, toilet	Race kit, wristband visible, start time on your arm
–0:45	Warm-up	Per the Warm-up protocol, 25–30 min
–0:20	Last sip, caffeine / gel	Only if you've tested it
–0:10	Start tunnel	Rulebook: 10 min before your start, briefing
0:00	Go	Calm first kilometre

Starting in the afternoon? Keep the structure: main meal 3–4 hours before, small snack 60–90 minutes before, then just water and maybe a gel.

BREAKFAST

Eat what you ate before your hardest sessions and simulations. Oats with banana and honey, white bread with jam, rice porridge. A bit of protein is fine; save the fatty, high-fibre stuff for Sunday. Coffee yes, if you normally drink it.

Sip steadily all morning, not half a litre ten minutes before the start. Too nervous to eat? Go liquid: smoothie, sports drink, thinner porridge. Caffeine only in a dose you've tested in training.

ARRIVAL

The hall is loud and busy. When you arrive, get the admin done first (check-in, chip, bag drop), then settle down. Strap the chip to your ankle so it doesn't move or rub. It's not allowed anywhere else. Don't step into the Roxzone or onto the course before your start, the chip could get read and mess up your time.

WARM-UP

The full routine is in the Warm-up protocol. Short version: easy jog or walk, hip, ankle and thoracic mobility, activation (glute bridges, a few lunges, a few burpees), then 3–4 strides at race pace. The warm-up area is usually small and crowded.

- Finish your warm-up 10–15 minutes before your start, not an hour before.
- In a cold hall, keep a top on until the last moment. But anything you start with you must carry to the finish, so drop it in your bag before the tunnel.

START CORRAL

You'll get final instructions in the start tunnel. Listen to them. Don't hang around in the tunnel once your wave has gone. Last 60 seconds: three slow breaths in through the nose, long breath out through the mouth, and your first cue word, something like "easy". On the course, the inside Fast Lane is for 4:00/km pace and faster, everyone else runs in the outside lane.

GOLDEN RULE

Rush the morning and you'll panic on the course. The buffer in your timeline is your insurance. Better to sit in the hall for an extra ten minutes than to run to the start line.

05 · DURING THE RACE

THE RACE IS WON IN YOUR HEAD.

Your body is ready. Now it's about not letting your head undo what your body can do. Mental tools only work if you've practised them in your simulations.

BREAK IT INTO CHUNKS

An hour and a half is too long to think about the finish line. So don't. The race is eight blocks: one kilometre plus one station. Tick off a block and only deal with the one you're in. And within each block, smaller pieces still: this lap, this sled lane, these ten wall balls.

SECTION	IN YOUR HEAD
Runs 1–2	Hold back. Pace, breathing, relaxed shoulders. "This is the warm-up."
Sleds and run 3	First real pain. You expected it. Short steps, the legs will come back.
Burpees and row	Rhythm. Then reset on the rower: breathing, pace check, plan for the second half.
Farmers, lunges	Don't put it down, don't stand still. Every step moves you forward.
Run 8 and wall balls	Last block. Sets as planned. Now you can empty the tank.

CUE WORDS

One or two words per section. Short, technical, rehearsed. A tired brain can't handle a complicated thought. It can handle a word.

RUNNING

- **Easy** – first kilometre
- **Short** – after a station, short stride
- **Loose** – shoulders down, relaxed arms

STATIONS

- **Hips** – SkiErg, row
- **Low** – sled push
- **Heels** – sled pull
- **Rhythm** – burpees, lunges
- **Down and up** – wall balls

THE CRISIS IS COMING. YOU KNOW WHERE.

A bad patch doesn't mean you're doing something wrong. It's part of the race, and for most people it shows up in the same places:

- **Sled push and pull, run 3.** Heavy legs, heart rate high, and you're only a third of the way in. This is where your head starts negotiating. Your answer: just this lane, just this lap.
- **Lunges.** Burning legs, long and monotonous. Think only about the next knee touching the floor. Count steps in tens, look a few metres ahead, not at the end of the lane.
- **Wall balls.** The finish is in sight but the tank is empty. This is where having a set plan decides it. People without one end up doing sets of three and standing around.

BREATHING

- Running: rhythmic breathing, e.g. 3 steps in, 2 out. When the rhythm falls apart, ease off a few seconds.
- Stations: breathe out on the effort (pull, jump, throw), in on the release.
- Roxzone: two or three long exhales through the mouth. Get your heart rate down before the next piece of work.

WHEN SOMETHING GOES WRONG

NO-REP STAY CALM, NEXT REP	Don't argue. The judge will tell you what was wrong. Fix it and keep going. On stations 1–7 you get one warning, then penalties. After the first warning, slow down and make every rep clean, even if it costs a few seconds.
CRAMP SLOW DOWN, DON'T STOP	Usually calves or quads. Ease off for a moment, a quick stretch, drink in the Roxzone. Then carry on with shorter steps or smaller sets.
PACE DROP NEW PLAN	A run is 30 seconds slower than planned? Don't try to win it all back on the next kilometre. Set a new realistic pace and hold it. You won't recover lost time by blowing up on the next run.
LAP COUNT COUNT YOUR OWN	Not sure how many laps you've done? One too many beats one too few. A missed lap costs minutes or a DQ. So count your laps, on your fingers or by the arches.

WARNING

Dizziness, chest pain, sudden sharp joint or muscle pain, confusion: stop and ask a judge or the medics for help. No time is worth it.

06 · AFTER THE RACE

DONE.
NOW LEARN FROM IT.

The race ends at the finish line. The learning starts after it. And how you recover decides how quickly you're back in training.

STRAIGHT AFTER THE FINISH

01 **Don't collapse on the floor.** Walk for 5–10 minutes. Your heart rate comes down gradually and your legs will thank you.

02 **Drink.** Water, sports drink. Small sips, not a litre in one go.

03 **Change.** Dry, warm clothes within 15–20 minutes. A wet shirt in a hall cools you down fast.

04 **Eat.** Within an hour, something with carbs and protein. Banana and yoghurt, a sandwich, a protein shake with bread. A proper meal within 2–3 hours.

05 **Write down how it felt.** Before you forget. Where it hurt, where you slowed down, what worked.

If you took your shoes off for wall balls, you carry them to the finish, you can't go back into the wall ball area. Any kit a judge confiscated can be collected at customer service after you finish.

THE DAYS AFTER

DAY	DO	DON'T
0	Walk, eat, sleep. Warm shower.	Big night out with alcohol instead of food and sleep
+1	30–45 min walk, light mobility	Running, strength training
+2	Easy bike or swim 20–30 min, mobility	Deep tissue massage straight after the race
+3	Recovery massage, easy jog if you feel good	Intervals
+4–7	Gradual return, short easy sessions	Jumping straight into another simulation

Muscle soreness after HYROX usually peaks on day two, with quads and glutes taking the biggest hit from the sleds and lunges. That's normal. Sharp joint pain, or pain that keeps getting worse, isn't. Detailed recovery protocols are in the Mobility and Recovery guide.

RACE REVIEW

Your splits are on results.hyrox.com. Pull them up and copy them into the "actual" column on your pacing card. Then look at three things:

1. RUNS

How big is the gap between your fastest and slowest kilometre? Over a minute means you either started too fast or you're missing running endurance under fatigue. Which run did it break on?

2. STATIONS

Where did you lose the most against your plan? Usually it's the sled pull, burpees or wall balls. Was it technique, strength, or fatigue from the run before?

3. ROXZONE

Divide your total Roxzone time by sixteen. If the average is over 30 seconds, there are cheap minutes sitting there. Easiest improvement for your next race.

NEXT TIME

- **One** thing that worked and you're keeping
- **One** thing you'll change on race day
- **One** weakness for the next training block

Bring your review to Workshop 3 in week 12. That's where the exit tests and evaluation happen, and we'll look together at how your numbers have moved since kick-off. Feel free to drop your splits in the WhatsApp group too, we're happy to take a look.

GOLDEN RULE

Don't judge your race on finish time alone. Judge whether you stuck to the plan. Stuck to it and were slower? You've got clear work for training. Didn't stick to it? You need a better plan, not more training.

07 · PRINTABLE CHECKLISTS

FORGET NOTHING. TICK IT OFF.

Print it, stick it on the fridge, tick it off. What's on paper doesn't have to live in your head.

WHAT TO PACK

ID AND REGISTRATION

- [ ] Photo ID
- [ ] Registration confirmation (printed or on your phone)
- [ ] Wave time and check-in info

FOR THE RACE

- [ ] Race shoes, closed-toe (required the whole race, you may only take them off for wall balls)
- [ ] Race kit you've trained in
- [ ] Socks that don't rub, plus a spare pair
- [ ] Sports bra (if you wear one)
- [ ] Gloves, only if you train in them (gloves yes, grips no)
- [ ] Knee sleeves, if you use them (permitted)
- [ ] Lifting belt, if you use one (permitted)
- [ ] Gel or food for the race, carried on you from the start
- [ ] Hair tie, headband
- [ ] Inhaler, if prescribed (permitted)

BEFORE AND AFTER

- [ ] Warm layers for the warm-up and waiting around (hoodie, joggers)
- [ ] Dry clothes to change into after, including underwear
- [ ] Slides or comfy shoes
- [ ] Towel, toiletries, shower gel
- [ ] Water bottle, sports drink
- [ ] Breakfast (if travelling) and a pre-start snack
- [ ] Post-race food: banana, sandwich, protein

- [ ] Plasters, Vaseline or anti-chafe cream

BANNED DURING THE RACE

Headphones, phones (exception only for a medical device with prior Race Director approval), cameras, your own chalk, helmets. Anything the rulebook doesn't explicitly permit is prohibited. Check the list in your season's rulebook before you race.

BEFORE AND AFTER THE RACE

RACE WEEK

- [ ] Division, wave and start time confirmed
- [ ] I know when and where check-in is
- [ ] Travel, parking and accommodation sorted
- [ ] Current season's rulebook read
- [ ] Training as per the app, nothing extra
- [ ] Sleeping 8 hours or more
- [ ] Food bought for the last two days and race morning
- [ ] No alcohol
- [ ] Nothing new: shoes, food, supplements, warm-up
- [ ] Pacing card filled in (segment targets)

NIGHT BEFORE
